

Below are the field labels for the HISTA Data used to calculate the maximum elderly funding percentages. The number of low-income households and low-income elderly (55+) households are determined for each Urban Place within Regions 3, 6, 7, and 9. The data is organized as 540 fields that represent the various combinations of income ranges (I1 - I6), Age ranges (A1 - A9), Household Sizes (S1 - S5), and Renter or Owner Households.

Low-income is defined as below 60% AMI. Since the available data is organized in fixed ranges of \$10,000 income increments, the number of households in the \$10,000 range that contains the 60% AMI limit is pro-rated to include only those households below the maximum income.
